

(Riselab: <https://mortfund.com>)

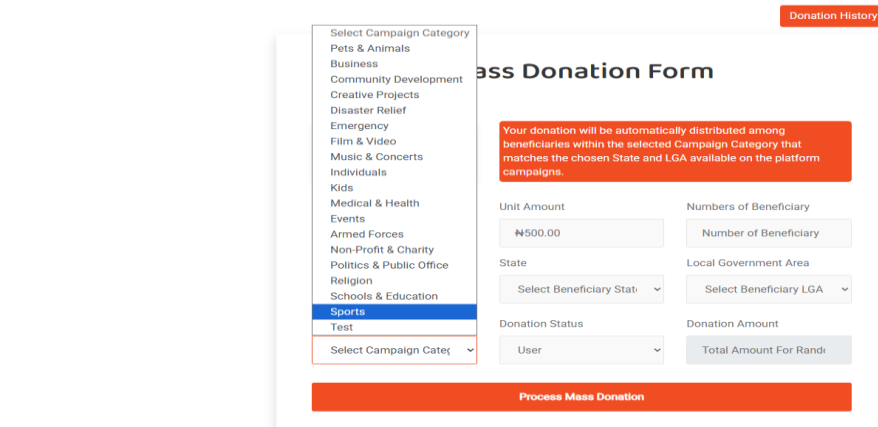

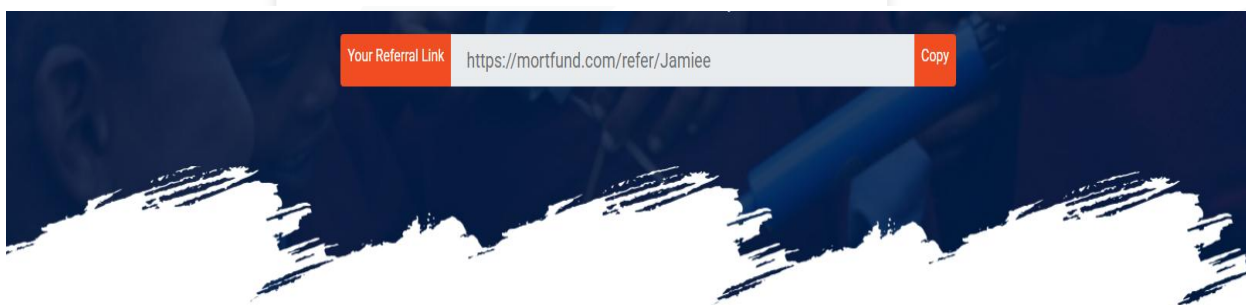

Dear Sir,

I've adjusted again the issues according to the requirements outlined in your document.

1. Point 1: Mass Donation: Check it and let's your feedback as soon as possible.

2.

Donated At	Trx.	Donor	Title	Category	Amount	Unit Amount X Beneficiary	Refund Amount	Status
01 Oct, 2025 10:31 AM	NKAB2E601J4Y	User	Esse dolorum volupta	Individuals	100.00	50.00 X 2 People	100.00	Refunded

3.

4 . **Admin Mass Donation Approval** : When approved and if category not found here , Mass donation will be refunded and balance will added in deposit balance. Also rejected it will be happened.

5 . **Donating to Fundraising with Payment Gateway not working** : **Fixed it**

6. The task is still not entirely clear to us, as it is new and we are not yet familiar with your bank's functionalities—how they work and how they are managed on other websites. Could you please prepare a separate document explaining **how this process would work automatically with your website users?**

On my side, I will add these fields for the manual withdrawal form. Please also let me know how this can be integrated to collaborate with your system for matching BVN using the user's name and details.

Withdrawal Process

Error 3: On the withdrawal process, The BVN did not verified or display the identity name cos anyone can decided to use different BVN for different account which that will make the withdrawal not to secure for users. Same on the withdrawal process, we have limited banks, the list of banks on the withdrawal is far less to the list of Nigerian Banks and some fintech banks, like Opay, Moniepoint e.t.c.

What we expect: Once the user selects the Bank and input the account number, the system will automatically fill the Users Bank name and correlate the name with the user BVN details before processing to the next step and the admin will receive the details and make payment.

7.

Bank Information

First Name *

Last Name *

BVN *

Account Number *

Bank Code *

Please Select One

SUBMIT

On the withdrawal process, the user name should be input automatically when the user Input the BVN, at the verification of the BVN the names will display, and the name must match with user account registration names.

Find below the display error from the BVN

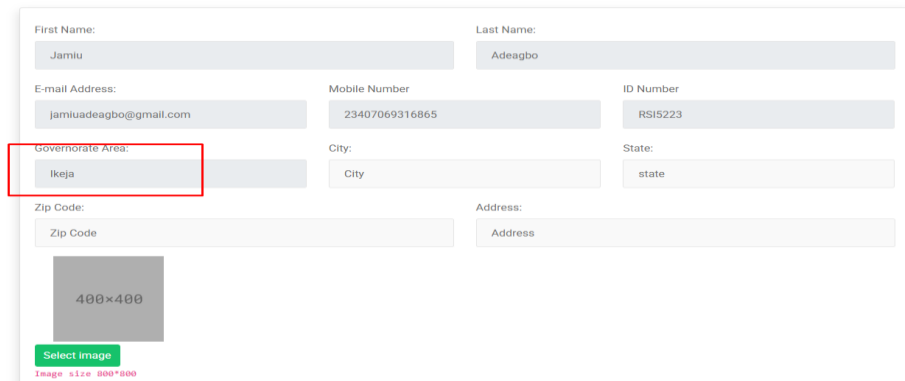

ⓘ BVN match requests exhausted for the month ✕

For the account Number and Bank Code, our expectation is for the user select Bank and Input account number and automatically, the Bank Name will display, matching the BVN record and all bank included, if this is possible from your end, you can go ahead to fix it.

option 2

The bank listed are limited to the number of Banks we have here in Nigeria, if possible to have all the bank included or for the withdrawal security reason, BVN can automatically fill the Bank Name as part of BVN Verification and users will only type in the Account Number and Bank name, the system will capture the name displayed as verification from BVN and display all together with the Account Number and Banks for admin to process the payment.

8. User Profile : Showing user governorate area

First Name: Jamiu Last Name: Adeagbo

E-mail Address: jamiuadeagbo@gmail.com Mobile Number: 23407069316865 ID Number: RSIS223

Governorate Area: **Ikeja** City: City State: state

Zip Code: Zip Code Address: Address

400x400
